

INSENSIV

STRING SHOT LAUNCHER DRONE DEFENSE SYSTEM

The insensiv String Shot Launcher is a mobile hand-operated defense system for the physical defense against threatening drones.

The drone is made unable to fly by means of the specially developed bullets, the String Shots.

The String Shots consist of two PLA half shells which are connected by a Kevlar string. When launching the String Shots the half shells open and the string gets tangled up with the rotor of the drone. The drone is made unable to fly.

Mobile drone defense set:

- Compressed air shot system with hinged magazine including 50 String Shot bullets
- 88g CO₂-cartridges for 100 shots each
- Case dimensions:
(LxWxD): 67x47x15,5 cm
- Fire range: approx. up to 80 m

Accessories resp. consumables:

- 50x String Shots
- 88g CO₂-cartridges for 100 shots each
- Special magazine for various string shot types of caliber .68

Application areas:

The String Shot Launcher is suitable for the defense against threatening drones in a close range up to approx. 80 meters. It supplements the existing measures within the scope of a comprehensive security concept e.g. for:

Events:

- concerts, sporting events
- political meetings, demonstrations

Object protection:

- prisons, authorities, company premises
- testing areas, research institutes
